

## OVERVIEW

PVP headsets equipped with the optional *Sidekick Bluetooth* function as *both* a motor headset for Law Enforcement use, and as a Bluetooth® cellphone interface, simultaneously presenting two-way radio traffic and cellular calls to the rider.

The headset will function in one of the two following modes:

**Motor Headset Mode** - The headset functions first as a standard motor headset. The microphone and both speakers are dedicated to the two-way radio.

**Cellular Mode** - the headset can also be paired to most cellphones with Bluetooth® capabilities and be used as a cellular headset to initiate or receive phone calls. When a call is in progress, the earphone speakers play both cellphone audio and two-way radio audio at the same time. The microphone remains connected to both the two-way radio and the cell call, allowing the rider to communicate over their Public Address or two-way radio without dropping an existing “live” cell call.

The *Bluetooth*® word mark and logos are registered trademarks owned by PVP Communications
